* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be generated and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                  contigor. Runs of Nare used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                          NOTE: This record contains 77 individual sequencing reads that have not been assembled into

Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Local mapping ellotts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < le-34) to the EST and CDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QUALITY OF INDIVIDUAL BASES. This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (23-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

```
CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                   STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

(Nuc. Acids Res. 25:389-3402) similarity are identified by BLAST (Nuc. Acids Res. 25:389-3402) similarity (expect < 1e·34) to the EST and cDMA sequences similarity (expect < 1e·34) to the EST and cDMA sequences of Sequences in the maintained sequence continuity across the splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
                                                                                                                                                                                                                                                                                                                                                                             ANNOTATION OF FEATURES:
                                                                                                                                                                                                                                                                                Features listing.
```

standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage. OUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

It currently consists of 34 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completeion. In the event that this clone who continued to complete the complete that the contract of the complete continued that the continued that the contract is made to complete the complete contract that the contract is made to complete the contract that the contract is made to complete the contract that the contract is made to complete the contract that the contract is the contract that the contract the contract the contract that the contract the contract the contract the contract that the contract the co

~

The present invention relates to a new G-protein coupled receptor (GPCR) colypeptide comprising greater than 70% amino acid sequence identity to the amino acid sequence of human GPCRs TGR21, TGR130.2, Che amino acid sequence identity to mouse TGR130.2, human TGR213 or TGR92, 80% amino acid sequence identity to mouse TGR180.2, cor 90% amino acid sequence identity to mouse TGR180.2, cor 90% amino acid sequence identity to human novel edg receptor protein, as defined in the specification. The GPCR covalently linked to a solid phase is useful for identifiance of the modulates signal cransduction. The identifiance of the modulates signal cransduction. The identified compounds are useful for treating transduction. The identifial compounds are useful for treating conseity, dyslexia and cardiac myxoma. The molecules of the invention are useful for diseases uch as renal failure, nephriliphedmia, or syndrome, asymptomatic urinary abnormalities, renal tubule defects, hypertension and nephrolithasis, liver-related disease or condition of hypertension and nephrolithasis, liver-related disease or condition of the invention is useful to treat or prevent any of the mouse GPCR TGR18 protein of the invention. This sequence encodes one of seaves. New G-protein coupled receptor polypeptides, useful for identifying modulators of signal transduction for treating kidney disease, hyperlipidemia, obesity, dyslexia and cardiac myxoma ö Cutler Claim 18; Page 58; 78pp; English. ```
orphan G protein-coupled receptor (GPCR), expressed in kidney and thyroid. The hCHNIO CDNA was identified using the human EST (expressed sequence tag) 1365839 as a probe. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular ligands has yet been identified for the proteins of the invention. The ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of
                                                                                                                          Human; orphan G protein-coupled receptor; GPCR; hCHN10; drug screening;
transmembrane receptor; expressed sequence tag; EST; signal cascade; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel human orphan G protein-coupled receptors and the encoding cDNAs for use in the identification of G protein-coupled receptor agonists .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists,

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antialergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparastic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel 1405 isolated polypeptides, useful for diagnosis, treatment and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative

The invention relates to isolated human G-protein coupled receptor (CCREC) polypeptides and their biologically active fragments. GCREC and protein is useful in treating a disease or condition associated with an increase or decrease in expression of functional GCREC. The GCREC's are useful in the diagnosis, treatment and prevention of cell proliferative disorders (cancer, leukaemia, melanoma); neurological disorders (stroke, epilepsy, Parkinson's disease, dementia, Alzheimer's disease); autoimmune inflammatory disorder (thyroiditis, haemolytic anaemia, AIDS, multiple sclerosis); cardiovascular disorder (atherosclerosis, angina pectoris), metabolic disorder (ulcer, cholelthiasis, gastroenteritis), metabolic disorder (lacer, cholelthiasis, gastroenteritis), metabolic disorders (diabetes); viral infections (herpes virus) and in the assessment of the effects of exogenous compounds on the expression of the nucleic acid and amino acid sequences. The present sequence is

The clone was obtcd. by amplifying DAMI (ATCC CRL 9792) cell regions of mouse P2U and chicken P2V1 receptors, and use of the PCR product to screen the DAMI cDNA library to isolate the full-length P2U2 receptor polypeptides and as probes.

                                                                                                                                                                                                                                                                                                                                                                                                               A cDNA clone (AAT75146) codes for human ATP receptor (AAW22732), a polypeptide structurally related to the g protein-coupled receptor family. It was alsocvered in a human placenta cDNA library. CDNA encoding the mature receptor, deposited as ATCC 97333, can be expressed in bacterial (e.g. E. coli), mammalian (e.g. COS) or lisect (e.g. Sf9) host cells and used to screen for agonists and antagonists useful in the treatment of a variety of disorders. It can also be used to identify a mutation in an ATP receptor gene and thus to dispasses, for susceptibility to diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          159 CTGTGGTGTTCGGCTACCTCTTCTGCATGAAGAACTGGAACAGCAGCAATGTCTATTT

Cybostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; ophthalmological; and vulnerary. The polynucleotides and polypeptides can be used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases, hyperproliferative disorders; cardiovascular disorders, erebrovascular disorders; andiogenesis, nervous system disorders. The polypeptides can also be used to aid wound healing and clisorders. The polypeptides can also be used to aid wound healing and clisorders. The polypeptides can also be used to aid wound healing and continuation croams before transplantation, for supporting cell culture of polypeptides can also be used as a food additive or preservative to polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional complete the examnlification of the examnli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The polynucleotide sequences given in AAC81086 to AAC81134 encode the human secreted proteins given in AAB45308 to AAB45356. AAB45337 to AAB45384 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include:
                                                                                                                                                                                                                                                                                                                                                            New nucleic acid molecules encoding 49 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        159 CTGTGGTGTTCGGCTACCTCTTCTGCATGAACAACTGGAACAGCAACAGCAATGTCTTT 218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AGTACTACCTCTCTGCATTTTATGCAATCGAGTTCATTTTTGGACTGCTTGGGAATGTCA 158
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            39 GCAGAATGGCACAGAATTTATCTTGTGAGAATTGGTTGGCAACAGAGGCTATCTTGAATA 98

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3
                                                                                                                                                                                                                                                                                                                                     The invention comprises the amino acid and coding sequence of a human g protein-coupled receptor. The DNA and protein sequences of the invention are useful for developing drugs to prevent or treat (gene therapy): central inervous system diseases; endocrine diseases; metabolic diseases; cancer; respiratory diseases; ingestive diseases; immune diseases; inflammations; infections; and circulatory diseases. The present DNA sequence encodes the human G protein-coupled receptor of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    537 GCAGTAACTGCATCGACTATGCAAGTTCTGGAAACCCTGAACACAATCTCATTTACAGCC 596

                                                 The sequence encodes a human G-protein coupled receptor (GFCR), hRUP21 The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GFCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GFCR, e.g. lung cancer. Mon-endogenous version of human GFCRs are also utilized in research settings and in vitro and in vivo system, incorporating GFCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased.

The invention relates to an isolated P2Y-like receptor polypeptide (ABBB38184 PABB8319) which is also referred to in the specification as antagonist) which modulates D2Y receptor activity is useful to treat a subject having a disorder that is responsive to P2Y-like receptor modulation. The disorder is a disease of immunity or inflammation. The substance may also be used to manufacture a medicine for the treatment or p2Y-like receptor and is responsive to stimulation or modulation of P2Y-like receptor activity. Disorders which may be treated include colon cancers, asthma CoPlits, inflammatory bowel syndrome, olderative colitis, theumatoid arthritis, viral diseases, hacterial infections, autoimmune diseases, dermatitis, glomerulonephritis allergies, allergic hibitis, inflammatory pain and general inflammation such as tendonitis, antimulatis, inflammatory pain and general inflammation such as tendonitis, and immune the such as the pain and general inflammation such as tendonitis, and immunerative man immunerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                            Human: Py2-like receptor; HIPHUM 0000037; immunity; inflammation; cancer; Crohn's disease; irritable bowel syndrome; rheumatoid arthritis; immunomodulator; anti-inflammatory; cytostatic; antiarthmatic; gastrointestinal; anti-ulcer; antirheumatic; antiarthritic; virucide; antibacterial; immunosuppressive; dermatological; nephrotropic;
